Admin tasks by where they live

Why "More" works for admins

Cross-role IA principles applied

What changed (vs the previous nav)

This document describes the ideal screen flow through NexFlow for each of the five primary personas, using the new 6-tab top navigation (**Home** · **CRM** · **Contact Center** · **Enrichment** · **Marketing** · **More**). Hover any top-tab to reveal its sub-tabs; click to land on that section's primary screen.

The point of the new IA is that every role gets to its daily work in **one or two clicks** from the top bar, and never has to hunt for a "Dashboard" tab that shows nothing.

■ Top-bar map (shared across all roles)

TOP TAB	SUB-TABS (VISIBLE ON HOVER)	PRIMARY LANDING PAGE ON CLICK
Home	Command Center · Daily Insights · AI Assistant	/ (Command Center)
CRM	Pipeline & Deals · Contacts · Companies · Account Hub · Quotes & CPQ · Forecasting · Health Scores	/funnel (Pipeline)
Contact Center	Call Dashboard · Power Dialer · Calls & Transcripts · Conversation Intel · AI Voice Agent · Knowledge Base · Email · Messages · WhatsApp	/call-list (Call Dashboard)
Enrichment	Bulk Enrichment · Quick Enrich Lead · Card Scanner · Buying Signals · Lead Intelligence	/sourcing (Bulk Enrichment)
Marketing	Campaigns · Sequences · Marketing AI · Meetings · Templates · Audiences · Web Forms · Document Tracking · Quote-to-Cash · Cultural Intelligence	/campaigns
More ▼	Automation · AI Hub · Insights & Analytics · Data Tools · Settings (each is a categorised group)	(dropdown only — pick a section)

Why six tabs. Five named buckets plus a "More" overflow keeps the top bar scannable on every viewport — phones, 13" laptops, 27" displays — and matches the mental model people bring from Gmail, Notion, Linear, and HubSpot.

■ Persona 1 — CEO / Founder

Goal: know the state of the business in 60 seconds, get pinged when something breaks the plan.

Daily landing

- **Home → Command Center** (one click — already where you land at sign-in).

- The hero AI briefing is the first thing they read: pipeline weather, at-risk deals, AI agent activity overnight.
- The KPI strip below the hero shows Calls Today / Hot Signals / AI Sessions / At-Risk Deals — all clickable through to the underlying screens.

Weekly cadence

WHEN	WHERE	WHY
Mon AM	Home → Command Center	Read the AI briefing, scan "What NexFlow AI noticed for you"
Mon AM	CRM → Forecasting	Pipeline → Best-Case → Commit waterfall, AI risk callouts
Wed	More → Insights & Analytics → Team Performance	Rep leaderboards, velocity vs target
Fri	More → Insights & Analytics → Attribution	Where this week's pipeline came from
Any time a notification fires	bell icon	Single-click to the source incident

Single-click escape hatches

- **AI Assistant** in Home → ask anything ("how is Aramco trending?"). The AI links its answers back into the relevant screens.
- **More → Settings → Capabilities** for a guided tour to share with the board.

Screens they should rarely need

- Card Scanner, Power Dialer, Sequences, Web Forms — these are operator tools, not exec tools. They're still reachable in one hop, just not pinned.

■ Persona 2 — Sales Rep / Account Executive

Goal: start the day knowing exactly who to call, why, and what to say; keep the pipeline clean as deals move.

Daily landing

- **Home → Command Center:** Re-Engagement Opportunities and Next Best Actions drive the first hour. Tasks tab carries today's reminders.
- **Contact Center → Power Dialer** (newly position 2 — was buried at #4 before): kick off the morning call block. The dialer auto-prioritises the list using AI scoring.

Hourly flow

STEP	WHERE	OUTCOME
1. Wake-up	Home → Command Center	Read briefing, accept/dismiss Next Best Actions
2. Calls	Contact Center → Power Dialer	Run AI-prioritised dialer queue
3. Live calls	Contact Center → Call Dashboard	See queue + live transcripts
4. Post-call	Contact Center → Calls & Transcripts	Review AI summary, tag follow-ups
5. Update deals	CRM → Pipeline & Deals	Drag deals across stages
6. New leads	Enrichment → Quick Enrich Lead	Single-shot AI enrichment in 6 sec
7. Field-trip leads	Enrichment → Card Scanner	Snap a business card on mobile, lands enriched in CRM
8. Outbound nudges	Contact Center → WhatsApp / Email / Messages	1-to-1 follow-up in the customer's preferred channel
9. Day-end	CRM → Forecasting	Confirm what they're committing this week

Why the IA helps this role

- **Power Dialer at position 2** means the most-used outbound tool is two clicks from anywhere instead of four.
- **Card Scanner moved to Enrichment** matches the rep's mental model — it turns a card into a fully enriched lead; it's not a "Sales" tool, it's the front door for new data.
- **No more empty "Dashboard" duplicate** in Contact Center — the strip now starts with **Call Dashboard**, which is the actual operational hub.

■ Persona 3 — Sales Manager / VP Sales

Goal: coach the team, unblock deals, hit the number.

Daily landing

- **Home → Command Center** filtered to their team (KPIs roll up to the team).
- **CRM → Pipeline & Deals** — instantly see deals stalled > 14 days.

Coaching flow

STEP	WHERE	OUTCOME
1. Pulse	Home → Command Center	Team briefing, at-risk count
2. Deal review	CRM → Pipeline & Deals	Filter "stalled" / "at risk"
3. Deal-level coach	CRM → Pipeline & Deals → click a deal	Open deal drawer, AI-suggested next steps
4. Call coaching	Contact Center → Conversation Intel	Listen to a rep's call with AI sentiment, talk-listen ratio, objection trends
5. 1:1 prep	More → Insights & Analytics → Team Performance	Per-rep velocity, win-rate trend
6. Forecast	CRM → Forecasting	Best-Case → Commit waterfall before the Friday roll-up
7. Approvals	bell icon → notifications	Quote / discount approvals in one click

Routing & Automation

- **More → Automation → Lead Routing** to tweak the auto-assign rules when a rep takes leave or a region heats up.
- **More → Automation → Workflow Builder** to instrument a new "Series B raised → CIO outreach" play once and let it run.

■ Persona 4 — Marketing / Demand Gen

Goal: ship campaigns, measure impact, hand qualified leads to sales.

Daily landing

- **Marketing → Campaigns** (one click — was previously two clicks past an empty "Dashboard" tab).
- The Campaigns page is the dashboard: active campaigns, sends today, open rates, pipeline sourced.

Production flow

STEP	WHERE	OUTCOME
1. Pulse	Marketing → Campaigns	Today's sends, open rates, pipeline sourced
2. Build a campaign	Marketing → Campaigns → "New"	Multi-channel campaign builder
3. Compose content	Marketing → Marketing AI	AI generates Khaleeji / MSA / English copy
4. Lift cultural relevance	Marketing → Cultural Intelligence	Auto-pause Maghrib, Ramadan greeting templates
5. Pick the audience	Marketing → Audiences	Smart segments built from CRM signals
6. Pick the template	Marketing → Templates	Reusable content blocks
7. Lead capture	Marketing → Web Forms	Drop a form on the site, leads stream into CRM
8. Document tracking	Marketing → Document Tracking	Who opened the proposal, how long for
9. Booking	Marketing → Meetings	Calendar widget, time-zone-aware for GCC
10. Attribution	More → Insights & Analytics → Attribution	Multi-touch revenue attribution

Cross-functional moments

- **Enrichment → Buying Signals** to find net-new accounts to target.
- **Contact Center → Conversation Intel** to mine "voice of customer" themes and turn them into campaign messaging.

■ Persona 5 — IT / Admin

Goal: keep the platform running, configured, secure, integrated.

Daily landing

- **More → Settings → Account Settings** — most admin work starts here.
- The bell icon for any system / billing notifications.

Admin tasks by where they live

TASK	WHERE
Add or remove users	More → Settings → Account Settings → Users
Change permissions / roles	More → Settings → Permissions
Audit security & compliance	More → Settings → Trust Center
Define custom fields	More → Data Tools → Properties
Merge duplicate contacts	More → Data Tools → Deduplication
Bulk import / export	More → Data Tools → Migration
Build / edit lists	More → Data Tools → Lists
Build / edit segments	More → Data Tools → Segments
Configure routing rules	More → Automation → Lead Routing
Build a workflow	More → Automation → Workflow Builder
Set up an AI agent	More → Automation → Agent Builder
Activity capture (auto-log emails / calls)	More → Automation → Activity Capture
Capabilities tour for onboarding new users	More → Settings → Capabilities
Investor data-room access	/investors (out-of-shell, passcode gated)

Why "More" works for admins

- Admin work is episodic — done in batches, not every hour. Tucking Automation, AI Hub, Insights, Data Tools, and Settings under **More** keeps the top bar uncluttered for the operators (CEO / Sales / Marketing) who use it constantly.
- Inside the More dropdown, the sections are **categorised** with their own small headers so admins can scan the full surface area in one glance.

■ Cross-role IA principles applied

PRINCIPLE	HOW IT'S APPLIED	WHO BENEFITS
One front door per role	The first sub-tab of each section is the role's daily landing	Everyone
No empty hub pages	Removed the auto-generated "Dashboard" sub-tab everywhere it duplicated a real one	Everyone — fixes the "Why is there a blank Dashboard?" complaint
Most-used tools first	Power Dialer moved to position 2 in Contact Center; Pipeline & Deals first in CRM	Sales reps + managers
Tools belong with their job-to-be-done	Card Scanner moved from Sales → Enrichment because it's a data-entry tool, not a sales workflow	Reps in the field
Hide infrequent surfaces	Automation, AI Hub, Insights, Data Tools, Settings all under More	Operators get a clean nav; admins still have one-hop access
Hover ≠ click	Hovering reveals sub-tabs as a tooltip dropdown so power users can jump anywhere in two clicks; clicking a top-tab still navigates to that section's daily landing	Power users

■ What changed (vs the previous nav)

BEFORE	AFTER
9 visible top sections (Home, Sales, Call Center, Marketing, Enrichment, Automation, AI Hub, Insights, Data)	6 visible top buttons (Home, CRM, Contact Center, Enrichment, Marketing, More)
Every section started with an auto "Dashboard" sub-tab pointing at <code>/section/<key></code> — often empty	Auto-Dashboard removed everywhere; section's primary screen is the dashboard
Contact Center order: Dashboard, Call Dashboard, Calls & Transcripts, Power Dialer, ...	Call Dashboard, Power Dialer , Calls & Transcripts, Conversation Intel, ...
Card Scanner was the 7th tab under Sales	Card Scanner is the 3rd tab under Enrichment
"Sales" + "Data" were two separate top tabs with overlapping concerns	CRM rolls up customer-facing work; Data Tools (Lists, Segments, Properties, Dedup, Migration) live under More for admins
No hover preview — clicking a section took you to the hub page even if you wanted a sub-tab	Hovering any top tab shows the section's sub-tabs in a dropdown — power users jump in one extra click
