

05 — In-App Documentation (All Four Roles)

the user-facing walkthrough of NexFlow, organized by role. For each of the four primary roles (CEO/VP Sales, Sales Manager, Sales Team rep — AE / SDR, Marketing) we describe what they see on login, the modules they live in, the workflows step-by-step, the AI features available to them, and the KPIs they should track.

Contents

05 — In-App Documentation (All Four Roles)

0. Common: what every role sees

1. CEO / VP Sales

- 1.1 What they see on login
- 1.2 The modules they live in
- 1.3 Key workflows (step-by-step)
- 1.4 AI features available to the CEO
- 1.5 KPIs to track
- 1.6 Permissions (CEO / Admin)

2. Sales Manager

- 2.1 What they see on login
- 2.2 The modules they live in
- 2.3 Key workflows (step-by-step)
- 2.4 AI features available to Sales Managers
- 2.5 KPIs to track
- 2.6 Permissions (Sales Manager)

3. Sales Team — Account Executive (AE) and SDR

- 3.1 What they see on login
- 3.2 The modules they live in
- 3.3 Key workflows (step-by-step) — AE
- 3.4 Key workflows (step-by-step) — SDR
- 3.5 AI features available to the Sales Team
- 3.6 KPIs to track
- 3.7 Permissions (AE / SDR)

4. Marketing

- 4.1 What they see on login

4.2 The modules they live in

4.3 Key workflows (step-by-step)

4.4 AI features available to Marketing

4.5 KPIs to track

4.6 Permissions (Marketing)

A. Cross-cutting: Account Settings & approval workflows

B. Cross-cutting: AI assistant invocation patterns

C. Mobile companion

Document scope: the user-facing walkthrough of NexFlow, organized by role. For each of the four primary roles (CEO/VP Sales, Sales Manager, Sales Team rep — AE / SDR, Marketing) we describe what they see on login, the modules they live in, the workflows step-by-step, the AI features available to them, and the KPIs they should track.

Module names and paths follow the actual TopBar in `artifacts/nexflow/src/components/layout/TopBar.tsx`.

■ 0. Common: what every role sees

After signing in, every user lands on the **Command Center** (/). The shell is identical across roles; it's the content priority and field permissions that change per role (configured in **Account Settings** → **Permissions**, see §A).

The persistent header (TopBar) has eight grouped mega-dropdowns:

1. **Home** — Command Center, Daily Insights, AI Assistant
2. **Sales** — Pipeline & Deals, Contacts, Companies, Account Hub (ABM), Quotes & CPQ, Forecasting, Card Scanner, Health Scores
3. **Call Center** — Call Dashboard, Calls & Transcripts, Power Dialer, Conversation Intel, AI Voice Agent, Knowledge Base, Email, Messages, WhatsApp
4. **Marketing** — Campaigns, Sequences, Marketing AI, Meetings, Templates, Audiences, Web Forms, Document Tracking, Quote-to-Cash, Cultural Intelligence
5. **Automation** — Workflow Builder, Automation Rules, Agent Builder, Lead Routing, Activity Capture
6. **AI Hub** — Lead Intelligence, AI Workforce, Predictive, Enrichment, Quick Enrich Lead, Signals, Sales Playbooks
7. **Insights** — Dashboards, Reports, Analytics, Team Performance, Attribution, Report Builder
8. **Data** — Lists, Segments, Deduplication, Migration, Properties

Right-cluster: global search (🔍), notifications bell (red dot when unread > 0), dark-mode toggle, avatar menu with Account Settings / Capabilities / Sign out / DEMO MODE chip.

□ Screenshot placeholder: / — Command Center landing with TopBar visible, Living Mesh background, daily-briefing hero card.

1. CEO / VP Sales

1.1 What they see on login

The Command Center hero shows a one-glance "state of the business": - This week's revenue vs target (Sand #C8A880 accent) - Top 5 deals expected to close (with risk pill) - Top risks flagged by AI (deals slipping, cold accounts) - Team activity heatmap (calls + emails + meetings, last 7 days)

1.2 The modules they live in

FREQUENCY	MODULES	WHY
Daily	Home → Command Center, Insights → Analytics, Insights → Dashboards	Pulse of the business.
Weekly	Sales → Forecasting, Insights → Team Performance, Insights → Attribution	Forecast accuracy, rep performance, marketing ROI.
Monthly	AI Hub → Predictive, Account Settings → Permissions	QBR prep + governance.
As needed	Sales → Account Hub, Call Center → Conversation Intel	Drill into a single account or a single call when something looks off.

1.3 Key workflows (step-by-step)

WORKFLOW 1.A — MORNING BRIEFING

1. Open `/`. Read the AI-generated briefing card at the top.
2. Click "**Open Insights**" → review any `critical` severity insight.
3. Click "**Brief me**" chip in the assistant if you want a 30-second voice summary.

□ Screenshot placeholder: `/insights` — feed of severity-coded insight cards.

WORKFLOW 1.B — FRIDAY FORECAST REVIEW

1. Open **Sales** → **Forecasting**. Confirm the **Commit** number.
2. Drill into any deal flagged "high slip risk".
3. Open **Insights** → **Team Performance**, scan rep leaderboards.
4. From the Team page, click any underperforming rep's row → review their last 5 calls in **Conversation Intel**.

WORKFLOW 1.C — QBR PREP (QUARTERLY)

1. Open **Insights** → **Attribution**, set window to "Last 90 days".
2. Switch model (first-touch / last-touch / U-shape) to compare.
3. Export the dashboard as PDF (top-right action).

1.4 AI features available to the CEO

- **Conversational assistant** (Home → AI Assistant). Ask: "What changed in my pipeline this week?" / "Which deals have lost momentum?"
- **AI Dashboard Generator** (Insights → Dashboards). Type "Show me revenue by segment, last 4 quarters" → instant dashboard.
- **Predictive** (AI Hub → Predictive). Quarter-end forecast with confidence band.
- **Insights feed** (Home → Daily Insights). Auto-flagged deal slips, cold accounts, hot signals.

1.5 KPIs to track

KPI	TARGET	WHERE TO FIND IT
Pipeline coverage (3× target)	≥ 3.0	Forecasting
Win rate	≥ 25%	Analytics → Funnel
Avg sales cycle	trending down	Analytics → Cycle
CAC payback	≤ 12 months	Attribution
Forecast accuracy	±5%	Forecasting
Rep ramp time	≤ 90 days	Team Performance

1.6 Permissions (CEO / Admin)

By default the **Admin** role has `edit` on every field (deal value, commission %, recording URL, discount %). See **Account Settings → Permissions** matrix.

2. Sales Manager

2.1 What they see on login

Command Center filtered to **their team**: pipeline, deals stalled > 14 days, calls scheduled today, approvals pending (from the Permissions approval workflows), at-risk reps.

2.2 The modules they live in

FREQUENCY	MODULES
Daily	Home → Command Center, Sales → Pipeline & Deals, Call Center → Call Dashboard
Weekly	Insights → Team Performance, Sales → Forecasting, Automation → Lead Routing
As needed	Call Center → Conversation Intel (rep coaching), Account Settings → Permissions (approvals)

2.3 Key workflows (step-by-step)

WORKFLOW 2.A — MORNING STANDUP PREP

1. Open `/`. Confirm yesterday's deal movements.
2. Open **Sales → Pipeline & Deals**. Filter `Owner = my team`.
3. Hover any "stuck" deal — read the AI risk reason.
4. Tag deals to discuss in standup → bulk-create tasks for owners.

□ Screenshot placeholder: `/funnel` — kanban with stage chips, owner avatars, AI risk pills.

WORKFLOW 2.B — APPROVE A DISCOUNT > 20%

1. Bell icon shows "1 approval pending" → click.
2. Approval card shows: deal, discount %, requesting rep, AI assessment of margin impact.
3. Approve / reject inline (one click). The originating quote auto-updates.

WORKFLOW 2.C — COACH A REP ON A CALL

1. Open **Call Center → Conversation Intel** → click rep.
2. Pick a recent low-sentiment call.
3. Read AI summary, talk-listen ratio, missed objections.
4. Click "**Send coaching note**" → rep gets a notification with timestamps.

WORKFLOW 2.D — ROUTING CHANGE

1. Open **Automation → Lead Routing**.
2. Adjust round-robin weights or territory map.
3. Save → effective immediately on new inbound leads.

2.4 AI features available to Sales Managers

- **Conversation Intelligence** with AI talk-listen, sentiment, missed-objection detection.
- **Power Dialer** auto-prioritization (so the manager can hand a queue to a struggling rep).
- **Predictive** for individual deal slip probability.
- **Agent Builder** to create a "Discovery Coach" agent that auto-shadows reps.

2.5 KPIs to track

KPI	TARGET	WHERE
Team pipeline coverage	≥ 3.0	Forecasting
Activities per rep per day	≥ 30	Team Performance
Avg call sentiment	trend up	Conversation Intel
Approval response time	≤ 4 h	Permissions / Notifications
Stalled deals (> 14 d)	$\leq 10\%$ of pipeline	Pipeline filter

2.6 Permissions (Sales Manager)

Default `edit` on every field — same as Admin. The Sales Manager is the named approver for **Discount** $> 20\%$.

3. Sales Team — Account Executive (AE) and SDR

The two sub-roles share most of the surface but have different default permissions: AEs see deal values; **SDRs do not** see deal values, commission, or call recording URLs (per `permissions.tsx` defaults).

3.1 What they see on login

Command Center filtered to **them personally**: - Today's call queue - Today's meetings - Top 3 priority leads (ranked by AI Lead Intelligence) - New signals on accounts they own - AI assistant invitation: "Want a 60-second briefing?"

3.2 The modules they live in

ROLE	DAILY	WEEKLY
AE	Sales → Pipeline, Sales → Contacts, Call Center → Calls + Power Dialer, Home → AI Assistant	Sales → Forecasting (their slice), Sales → Quotes & CPQ, Marketing → Sequences
SDR	Call Center → Power Dialer, Sales → Contacts, AI Hub → Lead Intelligence + Quick Enrich Lead, Home → AI Assistant	AI Hub → Sales Playbooks, Marketing → Sequences

3.3 Key workflows (step-by-step) — AE

WORKFLOW 3.A — WORKING A DEAL

1. **Sales → Pipeline & Deals.** Drag the card to the next stage when criteria are met.
2. Open the deal, scroll the timeline (auto-populated by Activity Capture).

3. Click **"Generate next-best action"** → AI suggests a call, a follow-up email, or a stakeholder to involve.
4. From the AI suggestion, click **"Send"** → the email is drafted in the composer with the right template.

WORKFLOW 3.B — SENDING A QUOTE

1. Open the deal → **Quotes & CPQ** tab.
2. Add line items. The system applies the role's discount limit (capped at 20% before approval).
3. Click **"Send quote"** → email goes via Resend; opens are tracked in **Document Tracking**.

WORKFLOW 3.C — LOGGING A CALL

1. **Call Center → Power Dialer** → click "Start session".
2. Dialer auto-loads the prioritized list.
3. After the call, the AI fills the disposition + summary; AE confirms / edits.
4. Sentiment + transcript are saved to the contact's timeline.

□ Screenshot placeholder: `/power-dialer` — queue card, in-call panel, post-call AI summary.

3.4 Key workflows (step-by-step) — SDR

WORKFLOW 3.D — WORKING THE QUEUE

1. **Call Center → Power Dialer** → start session.
2. Hit numbers; if no-answer, move on.
3. After every connect: AI auto-disposition; SDR confirms BANT chips (Budget / Authority / Need / Timeline).
4. Qualified leads → click **"Hand to AE"** → routing rule fires.

WORKFLOW 3.E — QUICK ENRICHMENT

1. **AI Hub → Quick Enrich Lead**. Paste a name + company.
2. AI returns enriched profile (LinkedIn URL, role, tenure, recent posts, open headcount).
3. SDR clicks **"Add to CRM"** → contact created with enrichment metadata.

3.5 AI features available to the Sales Team

- **AI Assistant** — first stop for any "what should I do next?" question.
- **Lead Intelligence** — ranks today's calls.
- **Power Dialer** AI dispositioning + post-call summary.
- **Conversation Intelligence** for self-coaching (rep can re-listen with AI commentary).

- **Sales Playbooks** — pick a play, the AI customizes it to the account.
- **Marketing AI** for sequences (AE-only) — generate email variants.
- **Quick Enrich Lead** — single-shot AI enrichment.

3.6 KPIs to track

AE

KPI	TARGET	WHERE
Pipeline coverage (personal)	$\geq 3 \times$ quota	Forecasting (my slice)
Win rate	$\geq 25\%$	Analytics
Calls per day	≥ 20	Team Performance (self)
Deal velocity (days/stage)	trending down	Analytics → Cycle

SDR

KPI	TARGET	WHERE
Dials/day	≥ 80	Power Dialer summary
Connects/day	≥ 12	Power Dialer
Qualified handoffs/week	≥ 8	Lead Routing log
Avg call sentiment	≥ 0.4	Conversation Intel

3.7 Permissions (AE / SDR)

Per `permissions.tsx` defaults:

FIELD	AE	SDR
Deal value	<code>edit</code>	<code>hidden</code>
Win probability	<code>edit</code>	<code>view</code>
Contact email / phone	<code>edit</code>	<code>view</code>
Quote discount	<code>view</code> (manager edits)	<code>view</code>
Call recording URL	<code>edit</code>	<code>hidden</code>
User commission %	<code>hidden</code>	<code>hidden</code>

■ 4. Marketing

4.1 What they see on login

Command Center for marketing: campaigns running today, open / click rates last 7 days, leads generated by source, AI insights about underperforming sequences, top content by engagement.

4.2 The modules they live in

FREQUENCY	MODULES
Daily	Marketing → Marketing AI, Marketing → Campaigns, Marketing → Sequences
Weekly	Insights → Attribution, Marketing → Audiences, Marketing → Document Tracking
Monthly	Marketing → Cultural Intelligence (calendar planning), Marketing → Templates

4.3 Key workflows (step-by-step)

WORKFLOW 4.A — LAUNCH AN EMAIL CAMPAIGN

1. **Marketing → Campaigns** → "New campaign".
2. Pick the **Audience** (from Audiences module) or build one inline.
3. Open **Marketing AI** → ask "Write 3 subject-line variants for [audience]" → pick winner.
4. Generate hero image with AI (chameleon-aware so brand stays on tone).
5. Schedule → Resend dispatches.

□ Screenshot placeholder: `/marketing-assistant` — chat panel with subject-line variants and a generated hero.

WORKFLOW 4.B — CULTURAL INTELLIGENCE AWARE SEND

1. **Marketing → Cultural Intelligence**. Confirm the next 30-day calendar (Ramadan, Eid, National Days).
2. Marketing AI auto-blocks send-times during prayer windows for KSA / UAE / Bahrain audiences.
3. Send-time AI chooses optimal slot in the audience's local TZ.

WORKFLOW 4.C — BUILD A SEQUENCE

1. **Marketing → Sequences** → "New sequence".
2. Define steps (Day 0 email, Day 3 follow-up, Day 7 LinkedIn task, Day 10 SDR call).
3. Variant A/B subject lines via Marketing AI.
4. Plug into a workflow (Automation → Workflow Builder) so a form submission auto-enrolls.

WORKFLOW 4.D — ATTRIBUTION REVIEW

1. **Insights → Attribution** → choose model (W-shape recommended for B2B).
2. Filter by campaign / source.
3. Identify highest-yield channel; reallocate next month's budget.

4.4 AI features available to Marketing

- **Marketing AI** (/marketing-assistant) — assistant that writes copy, subject lines, segments, and generates hero images.
- **AI Dashboard Generator** — same NL→dashboard as the CEO uses.
- **Cultural Intelligence** — region-aware send rules + content review.
- **Marketing Extras API** — segment-level AI insights (best send-time, predicted open).
- **Audience builder** with AI-suggested filters.

4.5 KPIs to track

KPI	TARGET	WHERE
MQLs / month	per plan	Campaigns + Audiences
Email open rate	≥ 35%	Campaigns
Email click-through	≥ 5%	Campaigns
Cost per MQL	trending down	Attribution
Marketing-sourced pipeline	≥ 40% of total	Attribution
Sequence completion rate	≥ 50%	Sequences

4.6 Permissions (Marketing)

Marketing reps see contact + company data and campaign metrics. By default they `view` deal values (don't edit). Adjustable in **Account Settings → Permissions**.

■ A. Cross-cutting: Account Settings & approval workflows

Path: /account-settings . Sections grouped as ACCOUNT / DATA & FIELDS / SECURITY & TRUST / PLATFORM, with a search filter at the top.

- **Permissions** (/account-settings/permissions) — field-level matrix per role: `edit` / `view` / `hidden` . Click any cell to cycle modes. Save persists to `localStorage` (today) → server persistence is a Phase-1.5 hardening item.

- **Approval workflows** — high-value actions require named approvers: | Action | Approver | Default | | --- | --- | --- | | Discount > 20% | Sales Manager | active | | Quote > \$250K | VP Sales | active | | Custom MSA terms | Legal + VP Sales | active | | Refund > \$5K | Finance | active | | Delete contact | Admin | active | | Bulk export > 1000 rows | Admin | off (toggle on) |
 - **Properties** — register custom fields (text, long_text, number, date, boolean, select, multiselect, url, email, phone) on contact / company / deal.
 - **Trust Center / Public Trust** — internal compliance overview + customer-facing trust page (opens in new tab, not embedded).
 - **Migration** — CSV import/export wizard.
 - **Capabilities** — what's enabled vs. roadmap.
-

■ B. Cross-cutting: AI assistant invocation patterns

The AI assistant is reachable from three places in every role:

1. **Home → AI Assistant** (/assistant) — full chat surface with suggestion chips.
2. **TopBar** ⓘ — inline command palette; can pivot a question to chat.
3. **Inline "Generate" / "Improve" buttons** — on Marketing AI, Agent Builder, Report Builder, Dashboards, Quotes.

All paths converge on `aiChat` / `aiJson` in `artifacts/api-server/src/lib/ai.ts` (see `docs/02-tech-stack.md` §7). All AI calls degrade gracefully — if the upstream provider is down, the UI falls back to a non-AI flow rather than throwing.

■ C. Mobile companion

The mobile app (`artifacts/mobile`) reuses the typed API client from `@workspace/api-client-react` . Bottom tabs: Home / Contacts / Pipeline / Calls / Agents. The most-common on-the-go actions:

- Log a call (Calls tab).
- Move a deal stage (Pipeline tab).
- Quick-enrich a contact via name / business card (Contacts tab → +).
- Receive push notifications for AI insights and approval requests.

Same role-based field permissions apply.
