The engineering-, design-, and product-facing reference for building, deploying, and operating **NexFlow** — the AI-native B2B CRM and sales operating system for the GCC.

Every document is shipped both as Markdown (for in-repo reading and version control) and as a branded PDF (for distribution to non-technical stakeholders).

■ Index

#	DOCUMENT	WHAT IT COVERS
01	Brand, Palette & Motion Guide — PDF	Chameleon DNA palette, the diamond-mark logo, Living Mesh background, motion conventions, the two motion-logo HTML files.
02	Full Tech Stack — PDF	Real, current stack of every artifact (web, mobile, API, libs) with version numbers and a stack-reconciliation appendix vs. the feasibility study.
03	Component Inventory — PDF	Every meaningful component in the web and mobile apps, grouped by the 8 TopBar mega-dropdowns.
04	Deployment Plan — PDF	dev / staging / prod, Replit Deployments path, AWS me-south-1 (Bahrain) residency path, DB migrations, secrets, observability, backup & DR, costs, release checklist.
05	In-App Documentation — All Four Roles — PDF	What each role (CEO, Sales Manager, Sales Team, Marketing) sees, modules they live in, step-by-step workflows, AI features, KPIs.
06	Phase 2 — Client Management Spec (Atlas) — PDF	Forward-looking spec for the post-sale relationship intelligence module.
07	Phase 3 — Client Onboarding Spec (Threshold) — PDF	Forward-looking spec for the AI-guided client onboarding & go-live module.

■ Re-rendering the PDFs

```
python3 docs/render_pdf.py
```

Reads every `docs/*.md`, renders to a branded PDF (NexFlow header, page numbers, palette accents, table of contents) using WeasyPrint. Output goes back into `docs/`.

■ Conventions

- The codebase is the authoritative source for technical decisions. When the original feasibility study disagrees (Next.js vs. Vite, Prisma vs. Drizzle, NestJS vs. Express), `02-tech-stack.md` §13 reconciles.
- Color values, motion durations, and brand assets in any new artifact must follow `01-brand-palette-motion.md`.
- Phase 2 (Atlas) and Phase 3 (Threshold) specs are **forward-looking** — they describe modules that are not yet built.
