Document scope: Index for the NexFlow pre-seed investor pack. All four documents and the slide deck reconcile to a single financial model and tell one consistent story.

This folder is the single source of truth for the NexFlow pre-seed round. It is designed to be sent as a complete bundle to investors, advisors, and design partners.

■ What's inside

#	DOCUMENT	FORMAT	AUDIENCE	PURPOSE
01	NexFlow Investor Deck — High Level	.pptx + .pdf	First-meeting investors	15-slide pitch deck. Read in 10 minutes; presented in 20.
02	Investor Deep-Dive	.md + .pdf	CRM-savvy investors doing diligence	Long-form thesis, market sizing, product architecture, returns math.
03	Feasibility Study	.md + .pdf	Strategic partners, syndicate leads	Refreshed feasibility analysis across market, product, regulation, financials, operations, risk.
04	Three-Year Financial Plan	.md + .pdf	CFOs, finance-led investors, model reviewers	Line-by-line walk-through of the financial model with sensitivities and KPI commitments.

■ How to read the pack

- **First meeting?** Open `01-investor-highlevel.pdf` and skim. 10 minutes.
- **Sufficiently interested to dig in?** Read `02-investor-deep-dive.pdf` end-to-end. ~25 minutes. This is the document we wrote for the investor who has seen 100 CRMs and wants to know why this one is different.
- **Diligence stage?** `03-feasibility-study.pdf` covers the operational and regulatory fit; `04-three-year-financial-plan.pdf` is the model in narrative form. Together they answer the questions a serious investor will ask before wiring.

All four documents are individually self-contained — none requires the others to make sense — but all four together form a coherent investment case.

■ Reconciliation guarantee

Every numerical figure in the deck and the three accompanying documents ties to the same single source of truth: the NexFlow three-year financial model. If you find a number that contradicts the model, treat it as a typo in the document and flag it — the model is canonical.

Key reference figures, used everywhere:

- **Pre-seed round:** \$100K on a \$1.5M pre-money SAFE (~6.25% on conversion).
- **Year 1:** 1,200 paying customers (~6,000 seats) · \$59.10 blended ARPU per seat / mo · \$4.26M ARR · \$1.68M revenue · 77% GM · \$1.23M EBITDA · \$0.98M NI.
- **Year 2:** 6,200 paying customers (~43,400 seats) · \$69.75 blended ARPU per seat / mo · \$36.33M ARR · \$19.72M revenue · 79% GM · \$15.42M EBITDA · \$12.34M NI.
- **Year 3:** 19,200 paying customers (~192,000 seats) · \$77.40 blended ARPU per seat / mo · \$178.33M ARR · \$110.66M revenue · 81% GM · \$89.23M EBITDA · \$71.38M NI.
- **Returns (illustrative, post-dilution):** \$100K SAFE returns ~**89x** (8x ARR exit), ~**134x** (12x ARR), or ~**200x** (18x ARR) at a Year-3 exit, assuming the pre-seed stake is diluted ~10x through subsequent Series A/B/C rounds — consistent with the 89x-200x range stated in the source feasibility study. The model's literal cap-table MOIC (no dilution) is roughly 10x larger and is shown alongside in `02-investor-deep-dive.md` §11 and `04-three-year-financial-plan.md` §8 as a sanity check on the model arithmetic.

■ Regenerating these files

The high-level deck lives as a slides artifact in this monorepo at `artifacts/investor-deck/`. To re-export PPTX or PDF after editing the deck source, use the standard slides export flow and drop the result into this folder as `01-investor-highlevel.pptx` / `01-investor-highlevel.pdf`.

The three markdown documents (`02` , `03` , `04`) are rendered to PDF by the workspace-wide branded PDF renderer:

```
python3 docs/render_pdf.py
```

This script picks up every `*.md` under `docs/` , `docs/business/` , and `docs/investor/` and writes branded PDFs alongside each markdown source. The `README.md` in this folder is also rendered as part of the bundle.
