

ORQUESTRA CRM — Redesign Spec v2

Author: Sara · **Version:** v2 · **Date:** 30 Apr 2026 **Priority:** Immediate · **Sections:** 11

A clean, structured rewrite of the agent's brief. Reorganized by tab with explicit add / remove / rename / merge instructions, and extended with the additional sections the build genuinely needs — data model, navigation map, AI layer, permissions, and acceptance criteria.

Contents

1. [Executive Summary](#)
2. [Sales Rep · Home — 4-Tab Workspace](#)
3. [CRM Tab — Restructure](#)
4. [Contact Center Tab](#)
5. [Enrichment](#)
6. [Marketing Tab](#)
7. [Cross-System Engagement Loop](#)
8. [Global Navigation Map](#)
9. [AI & API Layer](#)
10. [Data Model & Permissions](#)
11. [Acceptance Criteria & Deliverables](#)

Tag legend: add · remove · rename · merge · ai · new · fix · keep · review

01 / Executive Summary

The previous build did not match the brief. The CRM is currently flat, the Contact Center is not live, and Enrichment / Marketing / Home are organized in ways that don't reflect the actual workflow. This spec rewrites the structure cleanly so the engine can execute without

ambiguity.

Area	What changes
Home	Becomes a 4-tab workspace: Daily Briefing → Performance → To-Do & Alerts → Insights Dashboard.
CRM	Pipeline split from Deals; Contacts restructured; Calls folded into Engagement; Account Hub & CPQ relocated.
Contact Center	Live power dialer with three modes; live transcript + AI coach; post-call AI auto-actions.
Enrichment	Consolidated under one Enrichment Engine; Lead Intelligence removed; Search History added.
Marketing	Campaigns renamed Campaign Builder (manual + AI); Channels merged in; Email/Message generator added.
New layers	Navigation map, AI/API layer, data model, permissions, acceptance criteria.

02 / Sales Rep · Home — 4-Tab Workspace

 **URGENT** — Home is the rep’s first screen every morning. It must contain four tabs in this exact order, with a unified **AI Analysis Summary** band at the very top of each tab.

#	Tab	What it does
01	Daily Briefing	Briefing + Command Center + Daily Insights, all in one place. The “what to do today” view.
02	Performance	Rep performance with date filters (today / week / month / custom). KPIs, trends, bottlenecks.
03	To-Do & Alerts	Pending tasks, missed actions, urgent alerts — each with a one-tap “Execute now” button.
04	Insights Dashboard	Replaces the old “Daily Insights” tab. Shows lead insights and news with an AI summary band on top.

Global rule: the very first section on every Home tab is an **AI Analysis Summary** — a structured brief that condenses what matters right now, with actionable buttons that deep-link to the relevant action.

2.1 Tab 01 · Daily Briefing

Three sections, in this order:

Section	Title	Purpose
A	Briefing AI Summary	Structured summary of what the rep needs to do today. Each suggestion has an actionable button (call, WhatsApp, email, meeting).
B	Command Center	The action hub: call notes, send WhatsApp, follow ups, emails, AI voice agent calls, scoring & gap reports, coaching sessions, auto-generated contact lists.
C	Daily Insights (mini view)	A condensed view of today's insights — kept here for context. The full dashboard lives on Tab 04.
Optional	Daily Schedule + Top Signals	Schedule of the day, top signals, news pinned to the right rail.

redesign ai-summary

2.2 Tab 02 · Performance

Rep-level performance view with a **date filter** at the top (Today / This Week / This Month / Quarter / Custom range).

- **AI Analysis Summary** band at top — what's improving, what's slipping, why.
- **KPI tiles:** calls made, calls connected, meetings booked, SAL conversions, deals opened, pipeline value, win rate.
- **Trend charts:** KPIs over time across the chosen date range.
- **Bottleneck panel:** where the rep is losing time / leads, with one-tap recommended actions.
- **Comparison:** rep vs. team average (toggle on/off).

new-tab ai-summary

2.3 Tab 03 · To-Do & Alerts

The unified action queue. Each row has a one-tap **"Execute now"** button that runs the action without leaving Home.

- **AI Analysis Summary** band at top — prioritization rationale ("Start with these 3 because...").
- **To-do list:** pending tasks grouped by priority (Urgent / High / Normal). Each has Execute / Reassign / Snooze.
- **Missed action alerts:** tasks past their due time, calls not made, follow-ups overdue, leads going cold. Red-tagged.
- **Urgent signal alerts:** from the Engagement Loop (lead opened a link, filled a form, replied) — highest priority.
- **Execute now actions:** call (auto-dial), send WhatsApp (templated, AI-tailored), send email, book meeting, log note, escalate.
- **Bulk actions:** select multiple → execute as a batch.

new-tab execute-now ai-prioritization

2.4 Tab 04 · Insights Dashboard (*replaces "Daily Insights"*)

Restructured into a proper insights dashboard. Two main streams:

- **AI Analysis Summary** band at top — the headline: what's most important to know across all leads and news today.
- **Lead Insights:** behavioral changes (new role, funding round, news mentions), buying signals, score movements, intent triggers.
- **News:** news relevant to leads, accounts, and target sectors. Filterable by sector / account / signal type.
- **Card actions:** each insight/news card has Open Lead, Add to Today, Send WhatsApp, Schedule Call.

replace ai-summary

03 / CRM Tab — Restructure

 **HIGH** — The CRM dashboard is currently flat and uninformative. Rebuild it to surface flows, winning tactics, and richer insight beyond pipeline & deals.

3.1 CRM Dashboard — surface real insight

Currently shows only pipeline and deals. Must show **flows, winning tactics, and detailed insight** across contacts, companies, and lead stages. Add an AI summary band at the top.

redesign ai-summary

3.2 Split Pipeline from Deals

- **Pipeline** = sales pipeline *before* the lead becomes a SAL. Show how many leads are in each funnel stage, gap analysis, click-through to view leads, and AI-generated improvement suggestions.
- **Deals pipeline** = a new sub-tab created *after* the split. Tracks deal stages from SAL onward.

split new-sub-tab

3.3 Contacts — restructure

- Calls are not reflecting call analysis — fix.
- AI analysis is not generating call or meeting analysis — fix.
- Contacts tab should be an **overview**: AI-generated intelligence at top, then structured sections.
- **List membership** and **property signals** become toggle buttons (filter / view).

restructure ai-intel

3.4 Rename “Contacts Engagement” → “Engagement Activities”

Show analysis of all engagements with click-through to call/meeting analysis explaining the main points and resolution status. `rename`

3.5 Remove “Calls” as a separate tab

Calls live **under Engagement Activities**, not as their own tab. `remove`

3.6 Deals — fix the mapping

Deals must show the **deal stage of the lead**, not their company. Company-level deals (signal/news) shown via a **view toggle**. `fix`

3.7 Auto-generated Deal Stage for SAL2 leads

When a lead moves to SAL2, the deal stage auto-generates after the meeting. Deal

accessible from the right rail showing investment amount, with the same profile structure plus the deal stage. `add auto-generate`

3.8 Companies — enrich data

Generate richer company data fields (size, sector, ownership, financials, news mentions, related contacts). `enrich`

3.9 Account Hub — relocate to Companies

Add as a sub-tab at the top of Companies. `relocate`

3.10 Quotes & CPQ — demote to “More”

Low-frequency feature — moves under the “More” menu. `demote`

3.11 Forecasting — keep as is

`keep`

3.12 Health Score — review for folding

Evaluate folding into Pipeline or Deals rather than a standalone tab. `review`

 **Outstanding from previous brief:** the CRM / Contact Center / Enrichment **workspace** structure was not built. Add it.

04 / Contact Center Tab

 **HIGH** — Power dialer must be live, AI-coached, and tightly linked to Command Center.

4.1 Power Dialer — three calling modes

- **Auto-call by agent:** agent dials sequentially until reaching a prospect.
- **Manual:** rep dials directly from the app.
- **AI agent:** AI voice agent dials and handles the conversation.

`redesign ai-dialer`

4.2 Live transcript + AI coach during call

When the call starts, the transcript runs live under the dialer and is saved automatically.

Pre-call: quick prep summary (lead profile + last activity). **During call:** AI coach surfaces objection-handling and rejection responses in real time. `live-ai add`

4.3 Post-call AI auto-actions

When the call ends, the AI detector immediately:

- Creates the call note / meeting note / follow-up task into Command Center.
- Triggers WhatsApp or email auto-prompts asking the agent to push them — once approved, sent automatically.

`automation add`

4.4 Calls & Transcript tab

Show the **call score**, the reasoning behind it, and the action plan with full scoring analysis. Add a separate adjacent tab for **conversation intelligence**. `add`

4.5 AI Voice Agent — relocate

Move under **Settings** and **Knowledge** — both inside **Cloud Center setup**. `relocate`

4.6 Emails / Messages / WhatsApp → Post-Call Automation

Group all under **Post-Call Automation**:

- If lead doesn't respond → push a call activity with AI + send a tailored WhatsApp message.
- If lead responds → AI agent runs the conversation with full authority to book meetings.

`group ai-agent`

4.7 Latency fix

Resolve the audio/transcript delay reported during live calls. `fix`

05 / Enrichment

 **HIGH** — Heavy consolidation. Sub-tabs of Enrichment Engine are currently scattered as their own top-level tabs.

Before → After

Before	After
Dashboard	Enrichment Engine
Enrichment Workspace	— Dashboard (single, merged)
Bulk Enrichment	— Bulk Enrichment
Quick Lead Enrich	— Quick Lead Enrich
Card Scanner	— Card Scanner
List Upload + Dedup	— List Upload + Dedup
Buying Signals	— Buying Signals
Lead Intelligence	+ Search History (NEW)

5.1 Merge Dashboard with Enrichment Workspace

They are duplicates — keep one. `merge`

5.2 Move Bulk / Quick Lead / Card Scanner / List Upload + Dedup under Enrichment Engine

`consolidate`

5.3 Buying Signals → under Enrichment Engine

`consolidate`

5.4 Remove Lead Intelligence

It's just scoring — not needed. `remove`

5.5 Add new sub-tab: Search History

`new`

5.6 Company-level enrichment search

Search by company → return all leads in that company → enrich them in one action.

`feature`

5.7 Define Enrichment Engine = “prospecting from our database seeding”

Ask the user which enrichment signals they want via a multi-select drop-list covering all signal types. `define`

5.8 Buying Signals — map public channels

Map public sources / websites to surface news about leads — social media, PR, sector-specific platforms. `add`

5.9 Manually-uploaded lists — small questionnaire

Once a list is uploaded and deduped, prompt the user with a small drop-list questionnaire asking what data and profiling fields are required. `ux`

06 / Marketing Tab

 **HIGH** — Real, not a mock. Add an AI analysis layer on marketing performance — winning points, pain points, how to win.

6.1 Rename “Campaigns” → “Campaign Builder”

Two modes:

- **Manual:** upload key messages, content, visuals, artifacts.
- **AI Campaign Builder:** shows sales funnels with analysis on leads needing campaigns. User confirms or picks different segments / personas. After Q&A, auto-generates key messages, content, infographics, images, and videos using Gemini, OpenAI, Perplexity, and Anthropic APIs. Modify button to regenerate.

`rename ai-builder`

6.2 Merge Campaigns + Channels into one tab

Once a campaign is approved through the AI Builder, it can publish to channels directly from the same surface. `merge`

6.3 Sequence Templates + Audiences → one sub-tab

Group both under one sub-tab and ensure it’s accessible from inside Campaign Builder while building. `group`

6.4 Web Forms — refine

“Web form” = the submission forms after clicking ads on channels / website / organic

search. Refine so:

- Web forms are ready and addable alongside sequence templates and audiences.
- Inside Campaign Builder, marketing picks from a drop-list **or** creates one via AI.
- Add predictive analysis on campaign performance + opinion on pricing and channel approach.

refine predictive

6.5 Engagement Tracker → "Campaign Performance"

Show campaign name, full ad, where published, how many leads are active (opening links, filling forms, opening website, reacting). Filterable via campaign drop-list. `rename`

6.6 Cultural Intelligence — relocate

Becomes a button under Campaign Builder, also surfaced as an alert on the dashboard. Each campaign gets analyzed with suggested improvements + similar-campaign benchmarking. `relocate`

6.7 Email / Message Campaigns Generator — add

Currently missing. Must be built. `missing`

6.8 Real-time digital activity alerts to sales rep

When a campaign lead becomes digitally active, the assigned sales rep is alerted **immediately** with an "urgent / top priority — contact now" flag, surfaced on Home Tab 03 (To-Do & Alerts). `alert real-time`

07 / Cross-System Engagement Loop

 **URGENT** — Spans Marketing → CRM → Sales Rep Home. Makes the system feel alive.

7.1 Trigger flow

When a campaign lead opens a link, fills a form, opens the website, or reacts:

- Fire urgent alert to the assigned sales rep.
- Surface on Home Tab 01 (Daily Briefing → Top Signals).
- Push into Home Tab 03 (To-Do & Alerts) as top priority with "Execute now".

- Add a Command Center action with pre-filled WhatsApp / call template.

workflow real-time

7.2 SLA on response

If the rep doesn't act within X minutes, escalate to team lead and re-prioritize the alert. `sla`

08 / Global Navigation Map

09 / AI & API Layer

Capability	Lives In	Model / API	Context Needed
Briefing AI Summary	Home · Daily Briefing	Claude / Gemini	Today's tasks, pipeline state, signals, calendar
Performance AI	Home · Performance	Claude / Gemini	KPIs, historical trends, team baseline
Prioritization AI	Home · To-Do & Alerts	Claude	Task list, lead scores, signal recency
Insights & News AI	Home · Insights Dashboard	Perplexity + Claude	Lead profiles, account watchlists, news sources
Live AI Coach	Contact Center · Live Call	Claude (streaming)	Live transcript, lead profile, last activity
Post-Call AI Detector	Contact Center · Post-Call	Claude	Full transcript, call outcome, next step
AI Voice Agent	Cloud Center Setup	OpenAI Realtime / ElevenLabs	Knowledge base, scripts, lead profile
AI Campaign Builder	Marketing · Campaign Builder	Gemini, OpenAI, Perplexity, Claude	Funnel data, segments, brand assets

Predictive Analysis	Marketing · Web Forms	Claude + historical data	Past campaign performance, pricing
Cultural Intelligence	Marketing · Campaign Builder	Claude	Region, audience, GCC market context
Enrichment AI	Enrichment Engine	Vibe MCP + Claude	Seed company / lead, requested signals

Rule: every AI surface uses the appropriate model — don't hardcode one provider. Anthropic for reasoning and summaries, Gemini for multimodal generation, OpenAI for voice realtime, Perplexity for grounded news.

10 / Data Model & Permissions

10.1 Core entities

Entity	Key fields
Lead	name, contact, source, stage (MQL · SAL1 · SAL2 · Deal · Closed), score, owner, signals[], engagement[]
Contact	profile, role, company_id, list_membership[], property_signals[]
Company	name, sector, size, ownership, financials, news[], related_contacts[]
Deal	lead_id, stage, investment_amount, expected_close, owner
Engagement	type (call · meeting · email · whatsapp), outcome, score, transcript_id, ai_analysis
Campaign	name, mode (manual · AI), channels[], segments[], performance, leads_active
Task / Alert	type, priority, due_at, status, owner, execute_action, source_signal

10.2 Roles & permissions

Role	Can	Cannot
		See other reps' performance;

Sales Rep	View own pipeline, deals, tasks; execute actions; access enrichment within quota	export bulk data; modify campaigns
Team Lead	All Sales Rep + view team performance, reassign tasks, access coaching reports	Modify CMA compliance settings
Marketing	Campaign Builder, channels, sequences, audiences, web forms, performance	Access lead-level CRM data without rep approval
Admin	All of the above + AI Voice Agent setup, integrations, Cloud Center	—
Compliance	Read-only audit trail, transcripts, exports log	Modify any operational data

10.3 Compliance & audit

- All AI-generated outputs (call notes, summaries, campaigns) are logged with model name + timestamp.
- All outbound messages (WhatsApp, email, AI voice) require explicit agent approval before sending — no auto-send without consent.
- Exports of contact data are logged and accessible to Compliance.
- CMA-regulated context: HNW prospect data must not leave the regional infrastructure.

cma

11 / Acceptance Criteria & Deliverables

 **URGENT** — How we know the build is done correctly.

11.1 Dummy data everywhere except Campaign Builder

All tabs / sub-tabs / views populated with realistic dummy data so the flow is testable end-to-end. **Exception:** the AI Campaign Builder must be a real engine — no dummy.

data
build-engine

11.2 Workspace structure delivered

The CRM / Contact Center / Enrichment workspace (outstanding from the previous brief) is built and visible.

missing

11.3 Test scenarios that must pass

- Rep opens Home → sees AI summary → taps “Execute now” on top item → action runs without leaving Home.
- Lead opens a campaign link → rep gets urgent alert in Home Tab 03 within seconds.
- Rep finishes a call → call note + follow-up task auto-created in Command Center.
- Marketing builds a campaign with AI → publishes to channels in one flow.
- Performance tab filtered to “This Month” → KPIs, trends, and AI summary all reflect the range.
- Enrichment search by company → returns all leads → bulk enrich → Search History shows the run.

qa

11.4 Final deliverable

Provide **detailed change notes** documenting what was changed, where, and why — section by section, mapped against this spec’s section numbers. `deliverable`

End of spec

Execute in order. **Section 02 (Sales Rep · Home — 4 tabs)** is the most urgent. Acceptance criteria in Section 11 must all pass before sign-off.
