

THE FIRST GCC-NATIVE AI CRM

Where revenue learns to flow.

*A sovereign CRM platform engineered for Saudi Arabia and the wider Gulf —
bilingual at its core, AI-native, and built around how teams actually sell here.*

Built in the Gulf, for how the Gulf actually sells.

NexFlow was founded by GCC operators who spent a decade running revenue teams on tools that were never designed for this region — and decided to build the alternative.

MANDATE

Give every Gulf revenue team a CRM that thinks in Arabic, plans in Hijri, and respects how relationships are actually built.

CHAMELEON DNA

The CRMs the Gulf uses today were never built for the Gulf.

They translate the UI, but they don't translate the work — and revenue teams pay for that mismatch every day.

01

Built for Western workflows

Salesforce, HubSpot, and Pipedrive assume English-first pipelines, weekday rhythms, and direct outreach norms that don't fit GCC reality.

02

Arabic is an afterthought

RTL is bolted on. Arabic search is brittle. Bilingual records, Hijri dates, and Gulf naming conventions are unsupported or ugly.

03

Sovereignty & cost

Data leaves the region. Per-seat pricing is dollar-denominated and add-on heavy. Mid-market teams either overpay or quietly run on spreadsheets.

Four founding pillars.

Every product decision in NexFlow comes back to these four ideas.

PILLAR 01

GCC-native, not GCC-translated

Arabic-first records, true RTL throughout, Hijri and Gregorian side by side, and Gulf naming & address conventions modeled in the data layer.

PILLAR 02

AI-native by design

Every record carries a forecast, a next best action, and a written explanation — bilingual reasoning baked into the schema, not bolted on.

PILLAR 03

One platform, eight modules

CRM, marketing, calls, enrichment, and analytics live in one schema — no per-module licensing, no integration tax, no quiet data drift.

PILLAR 04

Sovereign & affordable

In-Kingdom data residency, SAR-aware pricing, and packaging built around mid-market reality — not enterprise add-on stacks.

What Gulf revenue teams actually struggle with – and how NexFlow answers it.

English-only pipelines & broken Arabic search

Bilingual record fields, normalized Arabic search with diacritic and dialect tolerance, and full RTL layouts at parity with LTR.

Manual data entry eats seller time

AI capture from calls, WhatsApp, and email auto-creates contacts, deals, and next steps – sellers approve, they don't transcribe.

Forecasts that nobody trusts

Per-deal AI win-rate, written rationale, and a leading indicator score – managers see why a number moved, not just that it did.

Per-seat pricing locks teams out

SAR-anchored tiers, a real free plan, and bundled modules – full stack instead of seven add-ons.

Data leaving the region

In-Kingdom data residency, regional compliance posture, and an architecture designed for sovereign deployment from day one.

What customers gain in the first 12 months.

Modeled against the Pipedrive Sales-CRM benchmark study and our internal feasibility analysis.

+28%

Pipeline velocity

Faster stage-to-stage movement once AI capture removes the data-entry tax on every seller's day.

+22%

Win rate uplift

From AI-prioritized next best actions and per-deal coaching surfaced in the seller's own workflow.

−40%

CRM admin time

Auto-capture from calls, WhatsApp, and email replaces the after-hours pipeline-update ritual.

−35%

Tooling cost

One bundled platform replaces a CRM + marketing + dialer + enrichment + BI stack.

Where NexFlow stands against global and local players.

CAPABILITY	NEXFLOW	SALESFORCE	HUBSPOT	ZOHO	PIPEDRIVE	LOCAL GCC STARTUPS
GCC-native, true Arabic / RTL	Native	Translated	Translated	Partial	No	Native
AI baked into the schema	Native	Add-on	Add-on	Limited	Limited	Wrappers
In-Kingdom data residency	Default	Enterprise	No	No	No	Sometimes
Bundled marketing + calls + enrichment	Included	Add-ons	Tier-gated	Modules	Add-ons	CRM only
SAR pricing & mid-market plans	Yes	No	No	Partial	No	Yes
Real free plan for SMBs	Yes	No	Yes	No	No	Rare
Mid-market depth & product roadmap velocity	High	High	High	Med	Med	Low / early

Local GCC startups column reflects the early-stage Arabic-first CRM cohort (e.g. Salla CRM-style add-ons, Misraj, regional Zoho-clones) – narrow in scope, often single-module, and yet to ship a unified AI-native platform.

Eight modules. One sovereign platform.

One schema, one identity, one bill — no integration tax between the things that should already speak to each other.

MODULE 01

CRM Core

Contacts, companies, deals, and pipelines built on a bilingual, GCC-aware data model.

MODULE 02

AI Forecast

Per-deal win-rate, written rationale, leading indicators, and explainable rollups.

MODULE 03

Conversation Capture

Calls, WhatsApp, and email transcribed bilingually, summarized, and turned into next steps.

MODULE 04

Cloud Calls

Built-in dialer, regional numbers, recording, and call analytics — no third-party telephony bill.

MODULE 05

Marketing

Email, WhatsApp, SMS journeys with attribution wired straight into pipeline.

MODULE 06

Data Enrichment

Regional company & person enrichment, with credit-based usage and source provenance.

MODULE 07

Workflows & Automation

No-code automations, approvals, and SLA timers — bilingual triggers and human-readable logs.

MODULE 08

Analytics & BI

Role-aware dashboards, cohorts, and pipeline health — no separate BI license required.

FOR THE CEO

Revenue health on one screen.

Stop asking your team to "pull the numbers." NexFlow assembles them, explains the deltas in plain language, and flags what needs your attention this week.

- Live ARR, pipeline coverage, and forecast confidence by segment.
- Bilingual narrative summaries — what changed, why, and what's at risk.
- Alerts on slipped deals above a threshold, sent before the QBR — not after.

FOR THE SALES MANAGER

Coach the team, not the spreadsheet.

Pipeline coverage, capacity, and conversion in one view — with AI flagging which rep needs which conversation this week.

- Per-rep pipeline coverage and aging-stage exposure.
- AI-generated coaching cards: who, what to do, why now.
- Deal-level call replays with bilingual transcript search.

FOR THE SALES TEAM

One screen for the whole day.

Sellers wake up to a prioritized list, not an empty pipeline view. Every action they need to take is already on the page — in the language they prefer.

- AI-prioritized "today" list with a written reason for each item.
- One click to call, log, or reply on WhatsApp — no app switching.
- Auto-drafted bilingual follow-up emails after every meeting.

TODAY · 12 PRIORITIES

AI-RANKED

**Call Khalid — Aramco renewal at risk**

No reply in 9 days · proposal expires Friday · win-rate dropped 18%.

NOW

**Send Stc proposal — discovery wrapped yesterday**

Bilingual draft ready · pricing pre-approved · 3 stakeholders identified.

10:30

**Reply on WhatsApp — Sara from Ma'aden**

Asked about implementation timeline · suggested reply drafted in Arabic.

11:15

**Demo prep — Riyadh Bank, 2 PM**

Account brief, last 4 calls summarized, and stakeholder map ready in one tab.

FOR MARKETING

Campaigns that pay back, segment by segment.

Bilingual journeys across email, WhatsApp, and SMS — with attribution wired straight into the pipeline so every spend ties back to closed revenue.

- Audience segments built off live CRM data — no nightly export.
- Multi-touch attribution down to SAR per closed deal.
- AI content drafting in Arabic and English, brand-tone-aware.

A three-year build path, anchored to Vision 2030.
